

JOTHIBASU K

Full Stack Developer | React.js · Python · Django · MySQL · MongoDB

+91 9159608154 | jothivikky2@gmail.com | github.com/jothivikky2-ui | linkedin.com/in/jothibasu-k | Pudukkottai, Tamil Nadu

PROFILE SUMMARY

Final-year B.Tech Information Technology student (CGPA 8.2) with hands-on experience building full stack web applications using React.js, Python, Django, MySQL, and MongoDB. Developed two end-to-end academic projects integrating REST APIs, machine learning, and NoSQL databases. Certified in Python Full Stack Development. Seeking an entry-level role as a Software Developer, Python Developer, or Full Stack Developer.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), HTML5, CSS3

Frontend: React.js (Hooks, JSX, State Management, Component Lifecycle), Vue.js, Bootstrap 5, Responsive Web Design

Backend: Django, Django REST Framework, REST API Design & Integration, JSON

Database: MySQL (joins, indexing, CRUD operations), MongoDB (collections, aggregation pipeline)

Tools & Practices: Git, GitHub, Postman, VS Code, SDLC, Agile Basics, API Testing

Core CS: Data Structures & Algorithms (Python) — arrays, strings, sorting, recursion, searching

PROJECTS

AI-Based Placement Prediction System | React.js · Django · Scikit-learn · NLP · MySQL [GitHub ↗](#)

- Built a full stack web application that predicts student placement outcomes using Scikit-learn classification models (Random Forest, Logistic Regression); designed the MySQL schema with indexing for efficient querying.
- Developed 8 Django REST API endpoints with JWT-based authentication; integrated an NLP preprocessing pipeline and LLM API to deliver career guidance; built a React.js dashboard to display prediction results in real time.
- Gained practical experience in full stack integration, REST API design, ML model deployment, database schema design, and secure authentication — all applied within a single project.

Smart Attendance Management System | Vue.js · JavaScript · MongoDB [GitHub ↗](#)

- Developed a Vue.js single-page application for multi-department student attendance tracking, supporting automated daily entry, monthly report generation, and CSV export.
- Built an analytics dashboard with attendance trend charts and student-level drill-downs using MongoDB aggregation queries; applied responsive design principles using HTML5 and CSS3.
- Practised component-based architecture, Vue.js state management, and NoSQL data modelling with MongoDB — strengthening skills in modern frontend development and database design.

INTERNSHIP & TRAINING

Python Full Stack Development Trainee — Besant Technologies, Chennai Jan 2026 – Apr 2026

- Completed 4-month intensive training covering React.js, Python, Django, MySQL, MongoDB, and REST API development; built 5+ mini-projects including CRUD applications and API integrations.
- Practised Git/GitHub version control, API testing with Postman, and responsive UI design with Bootstrap 5; earned Python Full Stack Development Certification on completion.
- Gained structured exposure to the software development life cycle (SDLC), including requirement analysis, development, testing, and deployment practices in a full stack context.

EDUCATION

B.Tech — Information Technology | Sri Krishna Engineering College, Chennai (Anna University) CGPA: 8.2 | 2022–2026

HSC — Class XII | Govt Boys Higher Secondary School, Karambakudi, Pudukkottai 2022

CERTIFICATIONS

- Python Full Stack Development Certification** — Besant Technologies (2026)
- React.js Development Training** — Besant Technologies
- SQL & Database Management Training** — Besant Technologies

LANGUAGES KNOWN

Tamil (Native) | **English** (Professional Working Proficiency)

ACHIEVEMENTS & ACTIVITIES

- Ranked in top 15% of department with a consistent CGPA of 8.2; received a distinction grade from the project review panel for the AI Placement Prediction System.
- Built a functional Django-based event management system within 24 hours at a college hackathon (2026); actively maintains 15+ public repositories on GitHub covering full stack and ML projects.
- Completed self-study in Data Structures & Algorithms using Python, covering arrays, strings, recursion, sorting, and searching algorithms — actively preparing for software engineering recruitment rounds.
